

SAXOCELL

25th May 2022 | New start-up

SaxoCell® would like to congratulate **RecTech GmbH** – a brand new start-up focused on developing designer recombinases for precision genome editing, a technology used in a SaxoCell® project.

Supported by the BMBF GO-Bio programme, the lab of Frank Buchholz founded the company to translate its scientific findings into a translational pipeline.

This is the first spin-off since the official launch of SaxoCell® and we take pride in this successful venture.
